EDUCATION

BSc Computer Science

2023-2026

University College London (UCL)

Grade: 83%

- Head of Development of UCL AI Society

A-levels

2020-2022

Haverstock School, London

Maths - A*, Further Maths - A* (97%), Computer Science - A*, Economics - A*

WORK EXPERIENCE

Software Engineer Intern | Wise

Jun 2026 - Sept 2026

- Working as part of the Database Platform team to build a self-service platform that orchestrates database life-cycle operations (provisioning, scaling, decommissioning) asynchronously via **Temporal Workflows** allowing all engineers across Wise to manage their database infrastructure.

Software Development Engineer Intern | Amazon

Jun 2025 - Sept 2025

- Refactored a component previously running on EC2 into an **event-driven AWS Lambda function** triggered by SQS messages (**300million/day**), reducing infrastructure costs by **90%**.
- Built an **AWS Lambda function with DynamoDB Streams and OpenSearch** that asynchronously scrolled through documents, processed them, generated CSVs with **OpenCSV**, and streamed results directly to S3. Applied a **producer-consumer multithreaded pattern**, cutting report generation latency by **85%**.
- Created an **AWS CloudWatch Dashboard** to track the state of SQS queues using AWS CDK in TypeScript.
- Integrated and worked extensively with **AWS Lambda, SQS, DynamoDB, S3, OpenSearch, SNS, and Step Functions**.

Junior Software Engineer | Ntropy Network

Jan 2023 - Jul 2024

- Was part of a team that **developed a comprehensive SaaS customer dashboard**, contributing both frontend and backend components.
- Successfully engineered a **self-serve billing functionality**, enabling users to independently enrol in a paid subscription through the dashboard. Led to a **20% growth in billed customers** within three months.
- Developed a complete **FastAPI backend RESTful API**, utilizing Pydantic for data validation and serialization.
- Integrated **OAuth2** into the backend API and frontend Next.js application. Implemented a secure user authentication and authorization system with JWT tokens, **serving over 1,000 authorized users**.
- Achieved 100% API test coverage using **pytest**, ensuring all backend routes are thoroughly tested. Integrated these tests into **CI/CD workflows**.
- Developed a KPI metrics tracking dashboard for the internal sales team using **Retool and SQL**. Provided actionable insights that **increased sales team productivity**.

Software Engineering Intern | Ntropy Network

Aug 2022 - Dec 2022

- Refactored the **monitoring, logging, and alerting system** resulting in higher error detection rates and a streamlined debugging process.
- Fixed several bugs within the **API, SDK and Kubernetes deployments**.

PROJECTS

Personal assistant for social connections | Anthropic Hackathon.

Used Anthropic's Claude LLM to create a chat integration capable of reading users' messages, scoring each chat based on a goal and answering any questions about existing conversations.

Audio Book Generator App | e/acc Hackathon

Developed a mobile application that generates a personalized story and narration based on user prompts, creating a complete audio book experience.

TECHNICAL SKILLS

Languages: Python, Java, SQL, JavaScript, R, C, C++, TypeScript

Frameworks/Tools: React.js, Next.js, FastAPI, Flask, Postgres, SQLite, MongoDB, Pydantic, SQLAlchemy, Alembic, Git, Flyte, Redis, Pandas, Numpy, Docker, Kubernetes, Celery

AWARDS

Top 5 Launch | Product Hunt

2023

- Launched a product with Ntropy that received 'Product of the day' award from Product Hunt

UKMT Gold | London

2020

- Achieved a gold award in the UK Maths Trust Challenge for the intermediate age category.
